PREFACE.

IN response to the oft repeated and urgently pronounced requests of my large and generous constituency, I have much pleasure in presenting my first Catalogue to the kind perusal of themselves and the public.

From the nature of the work it will, I am sure, without any further proof, be admitted that a large outlay of money, and an immense expenditure of time, have been demanded. Very many of the illustrations now appear for the first time in this country, and most of the representations have been drawn from the objects themselves. The work has, consequently, been delayed far longer than was intended, and now, although the utmost care has been taken, I should not like it to be received as perfect. Doubtless some inaccuracies have crept in unawares, but these, I trust, will be found slight, and unimportant in character, and will, in consideration of the amount of work involved in the compilation, be gently criticized.

The classification of the articles will be, as far as possible, alphabetical; and, for the further convenience of those using the Catalogue, an Index is added. In this the articles are, without any regard to their uses, arranged alphabetically, with a number annexed, which refers to the page upon which a description of the article may be found.

It is well known that in apparatus which is imported, unimportant variations in form are always liable to be found. In this respect, it will always be my endeavor to secure the style which shall contain the latest improvements, and be the most effective in operation. My bottles are all made on my own forms, and I can confidently give a guarantee that every article named in the following pages will be in every way as represented.

In conclusion, I beg to thank those who have so generously supported me in the past, and to express a hope that this work will be found useful in our laboratories and factories, and indeed in the hands of any person who may refer to it.

N. B.—Prices of Becker's Balances and Weights are advanced about 10 per cent. from prices in this Catalogue.

NOTICE.

THE "Albertype" of a portion of my lower show-room, exhibited in the front of this Catalogue, was prepared by Mr. E. Bierstadt, of this city, expressly for this work.

The prices placed against the several articles in the following Catalogue are for United States legal tender, and are arranged upon so low a scale that net cash payments will be required for single pieces, except when otherwise agreed. These prices are, of course, subject to alterations, according to the values of crude materials and labor, and to the fluctuations in the foreign markets. For example, I am already advised of a prospective advance on Becker's balances and weights at the beginning of 1873, amounting to about 10 per cent. on his prices in this catalogue.

The charges of packing and shipping must, of course, be borne by the purchaser; and, in the case of chemicals, unless otherwise directed, these will be put into bottles and suitable packages, the expense of which will be added to the cost of the materials themselves.

Damages occurring by breakage or otherwise, in transitu, are never entertained in this business, nor can claims for deductions of any kind be allowed, unless notice of the same be given within six days of the receipt of the goods. In every case the signed receipt for articles in good order will relieve the supplier from all responsibility.

In ordering goods, it is desirable that full shipping directions be given, as otherwise the selection of route will be considered as left to my own discretion. The fullest description of goods is also solicited, particularly when (as may be done) reference is made to any well known foreign catalogue.

Having engaged the services of an experienced glass-blower, numerous styles of small apparatus, not specified in this Catalogue, can be well and expeditiously manufactured. When such are required, it is necessary that the directions contain carefully prepared drawings and accurate dimensions.

All kinds of apparatus can be carefully and accurately repaired on the premises by experienced workmen.

Valuable apparatus, imported specially to order, for moderate terms, on commission. When such are imported for scientific institutions, they are free of duty.

The large outlay of money incident to the publication of this work compels me to make a charge of \$1.50 for each copy. This will partially cover expenses, and will, I am sure, be cheerfully paid by any who desire to consult the work.

E. B. B.

Entered according to Act of Congress, in the year 1872,

By E. B. BENJAMIN,

In the office of the Librarian to Congress, at Washington, D. C.

CATALOGUE.

FOR numbers 1 to 1,248 reference should be made to the Catalogue of Dr. H. A. WARD'S Casts of Fossils. This collection contains accurately formed models, and embraces all that has been discovered in reference to the Animal Kingdom, in its various subdivisions of Vertebrates, Articulates, Mollusks, Radiates, and Protozoans. Full descriptions will be found in the Catalogue, which, as a work of reference, should be in everybody's library.

Dr. Ward having paid me the compliment of making this establishment a special, and indeed, independent of his factory, the only depôt where his casts can be obtained at the manufacturer's prices, orders are earnestly solicited for these valuable additions to cabinets and college collections. The specimens are well arranged and classified for inspection, and can be supplied singly or in series.

Special attention is called to these casts, and a cordial invitation is extended to all who may feel a desire to inspect them. The extraordinary energy and ability displayed by Dr. WARD, in securing and collecting, from the most reliable sources, these remarkable specimens of **past ages**, is undoubtedly entitled to the warmest encouragement and earnest support on the part of his fellow countrymen. His depôts, established in London, and on the continent of Europe, are already giving him important evidence of the appreciation in which the people of those countries hold his successful endeavors for the advancement of science, and it is earnestly hoped, and indeed confidently believed, that as soon as it shall be generally known that a depôt has been established here, the people of the United States will also extend to the Doctor substantial tokens of their approbation.

Professor OWEN, in his popular work on a National Museum of Natural History, says: "A fossil bone, and a colored plaster cast of it, are not distinguishable at first sight—scarcely by sight at all. The artificial junction of a series of casts of the bones of an unique

fossil skeleton, produces a result equivalent, for all the purposes of public exhibition, to the articulated skeleton itself. Thus, every capital in Europe, the public museum of each civilized community, may show to the people the proportion of the creatures of former worlds, that science has so restored."

BALANCES OF PRECISION.

Analytical Balances.

No. 1. Analytical Balance, capacity 200 grammes in each pan, in fine polished glass case, beam divided in 1-10 milligrammes, sensible to 1-20 milligrammes. All agate bearings, with improved arrest for pans, and apparatus for specific gravity, &c., &c.
3 in. pans. Beam 14 in.

Price, \$105.00

No. 2. Analytical Balance, in fine polished glass case, capacity 100 grammes in each pan. Beam divided in half parts of milligrammes. Sensible to 1-10 milligrammes, with apparatus for specific gravity. All bearings agate.
2 1/4 in. pans. 12 in. Beam.

Price, \$85.00

No. 3. Analytical Balance, in French polished mahogany case, with counterpoised sliding door. Capacity 2000 grains, sensible to 1-100 grain. Steel bearings, movable
3 1/2 in. pans, 10 in. beam.

Price, \$40.00

No. 4. Same Balance as No. 3, has attachment for rider, and pan arrests. Beam graduated to one milligramme.

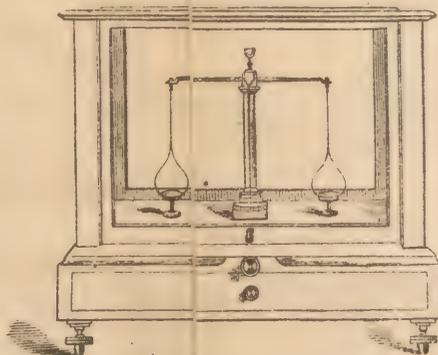

Price, \$50.00

Troemner Specific Gravity Scale.

Constructed after the plan of Dr. Mohr.
Price complete, \$20.00

Assay Balances.

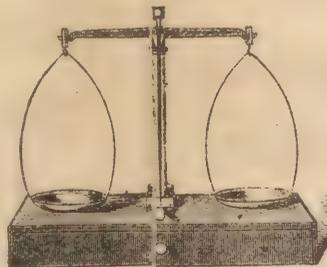

No. 1. In French polished glass case, beam resting on agate bearings. Sensible to 1-20 milligrammes.

Price, \$55.00

No. 2. In French polished glass case. Is arranged with rider apparatus and pan arrests. Open beam, divided in 1-10 milligramme; beam resting on agate plane. Needle shows ten divisions for one milligramme.

Price, \$80.00

Analytical Scales. Fig. 22.

For weighing Ores, Minerals, Gold and Silver Coin, Jewelry, Chemicals, &c., &c.

ELECTRICAL AND GALVANIC APPARATUS.

HOLTZ'S *wonderful Induction Electrical Machine as improved by BORCHARD*, and first brought into the United States for sale, by myself, in 1869. It is the most wonderful discovery, in regard to the length of the spark yet known—a spark 6 in. long having been obtained from a 12 in. plate machine, and glass perforated $1\frac{2}{3}$ in. thick. The remarkable machine, imported by myself, now in the possession of Prof. Blake, of Brown's University, has a 30 in. plate, and has produced a spark about 16 in. It was the result of the combined intelligence of Messrs. Holtz, Poggendorf, Rienz, and Dove; was manufactured expressly for me by Mr. Borchard, and is believed to be the best single machine of the kind in the world for practical purposes. It must be borne in mind that the machines I import are *all made for me by the inventor*, and the secret of the long spark has never yet been discovered by the greatest savans in Europe, and I presume that it will not be questioned but that those made by the inventor HIMSELF must inevitably be far superior to any imitations or copies; nevertheless, should my customers desire them, I am prepared to furnish imitations of this celebrated machine as low as any house in America. It should be borne in mind that these machines, with the extra appurtenances, can illuminate large Geissler tubes, pierce thick glass, show rotation by electricity, manufacture Ozone, etc. They are light and portable, and easily excited by the use of a sheet of hardened vulcanized rubber and a cat skin, and when once excited, are well known to retain their electricity from four to five hours. The new and

ingenious collecting and condensing apparatus, invented by C. Van Brunt, Esq., of this country, consisting of a multiplication of the points for the collection of electricity, and a tin foil condenser, as described in the journal of Franklin Institute, may be attached to this machine at my establishment.

2072.—**Dielectric Machine**, as constructed by M. Carré, having revolving wheels of hardened rubber, the electricity being supplied by friction on stationery rubbers located in front, so that electricity may be generated in every kind of weather. This machine is the most simple and powerful of the static conduction machines; being scarcely affected by atmospheric moisture, it becomes charged in a few seconds, and sustains its action indefinitely. With induction plates from 44 to 60

Electricity.—*Continued.*

centimetres, it gives a constant flow of sparks from 12 to 28 centimetres; it illuminates brilliantly Geisler tubes of over a yard connection; it pierces glass from 8 to 12 millimetres thick; in less than a minute the medium size machine will charge to overflowing a battery of 12 large jars, etc. It also performs the usual experiments of large coils, etc.

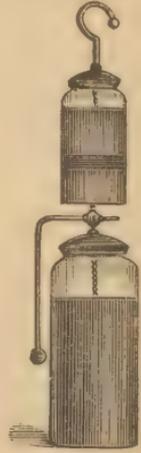

The price of a small machine giving from 30 to 40 millimetre sparks, is \$30.00

The foregoing arrangement of batteries is the most convenient, cleanly, and available form in use. It is arranged for the employment of one solution, which can be kept readily prepared at hand in a tight, ground stoppered bottle. When the battery is not in use, the zinc may be raised above the solution in the jar (which should be only half-filled with the same); and when the operator desires to renew the contact, the zinc is simply plunged into the fluid by pressing down the sliding rod. The top of the battery being always closed by a tight-fitting brass cap, no offensive fumes can escape to influence chemicals or the atmosphere in the vicinity. The operator will readily perceive that one cell can be employed alone, or any number to the extent of six. The seasonable employment of the sliding rod obviates any danger of shocks in connecting or disconnect-

This new and unique form of Electrometer is deserving of attention, on account of its extreme delicacy and facility of indication of very small amounts of electricity, which can also be quantitatively measured. Prof. Kirchoff has added a valuable and interesting photometric attachment, rendering it a very easily read, and most complete instrument. It is certainly a great step in advance in the quantitative estimation of electricity, and is receiving great attention from the Physicists of the old world. (See illustration on next page.)

The foregoing apparatus has come into extensive use both in Europe and in this country: filters precipitates, etc., which, with the old method, would take, in many familiar instances, four to ten hours to filter properly, in a tenth of the time taken by the old method. Alluminous, Sillicious, and ordinary sulphide of hydrogen precipitations, are quickly filtered from. So convenient and useful has it become, and so generally recognized by the profession, that it is considered almost an indispensable requisite of every laboratory. The illustration shows the arrangement of this pump; full description of the method of employment of this apparatus, and several of its excellencies may be found in Johnson's latest edition of Fresenius's Quantitative Chemical Analysis, from which I extract the following observations, and I have recently introduced an improvement in the working of this apparatus, by which the filtrate may be received directly into a beaker, for the suggestion of which I am indebted to Dr. Gibbs, of Harvard College.

"This apparatus is screwed down on a board fastened to the wall, in such a manner that each separate piece of the apparatus is held by a single fastening only, in order to prevent the tubes from being strained or broken by the possible warping of the board. On opening the first pincheock, the water flows down the discharge to a depth of thirty feet, carrying with it the air which it sucks through the upper tube. The second pincheock is used to regulate the flow of the steam, when the first one is completely open. The discharge pipe should have a fall of about thirty feet, and be of a diameter of half-an-inch, and end in a sewer or some other arrangement, to convey the water away. The filtration is made in the following manner. The receiver standing in a metallic vessel is connected by a small glass or rubber tube, with the discharging tube on left of the illustration (having previously been fitted with filter). At first, the delivery is gradual, but in a moment or two the filtrate runs through in a continuous stream, often so rapidly that one must hasten to keep up the supply of liquid.

"The Platinum Cone is placed in the bottom of the glass funnel, the dry paper filter then introduced in the ordinary manner, moistened, and freed from all adhering air bubbles by pressure with the finger. A filter so arranged, and in perfect contact with the glass when filled with a liquid, will support the pressure of an entire atmosphere without the least danger of breaking, and the interspace between the folds of the platinum foil is perfectly sufficient to allow of the passage of a continuous stream of water."

2358.—Ditto, Kent's, portable, sheet iron, small size, 17 in. high, of strong plate iron, lined with fire clay; it has six doors, the dome being hinged, that it may be more easily placed off or on; the openings are conveniently arranged for the reception of porcelain tubes; has a sand bath, water bath, a set of concentric rings, to receive a vessel as small as $3\frac{1}{2}$ inches in diameter.

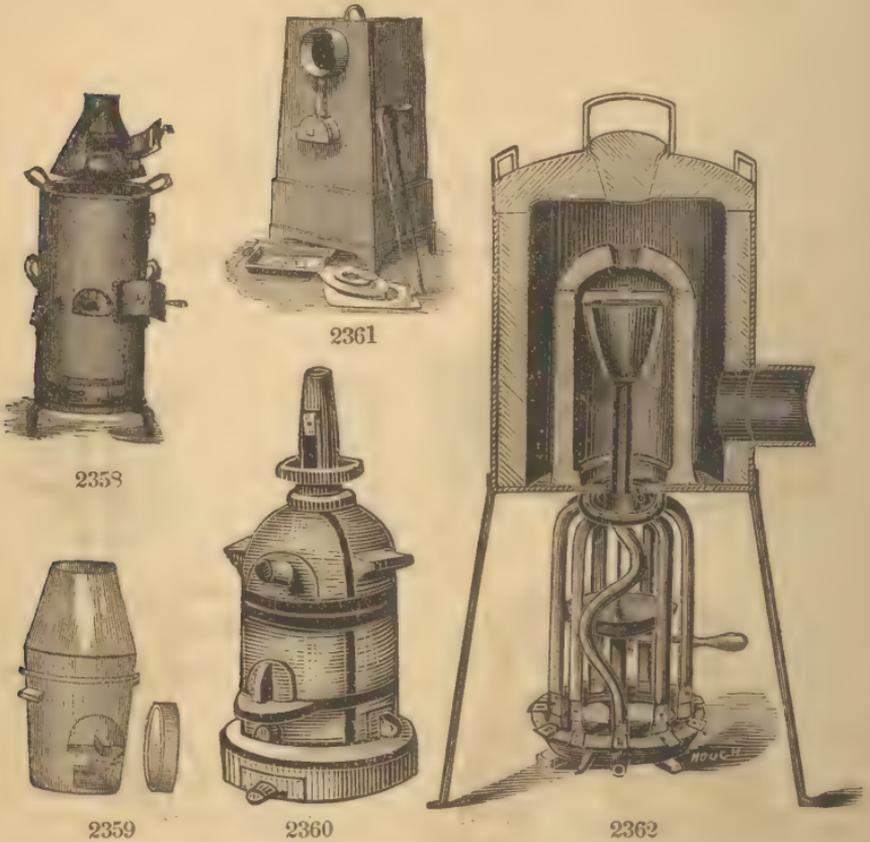

Each, \$25.00

2359.—Ditto, Chamott. " 3.00

2360.—Ditto, cupelling, French, of refractory clay, bound with iron bands; it is composed of three parts, without the dome,

with scorifying, cupel and tube openings, and stop doors for the same, complete.

Nos. 1	2	3	4
\$15.00	20.00	25.00	35.00 each.

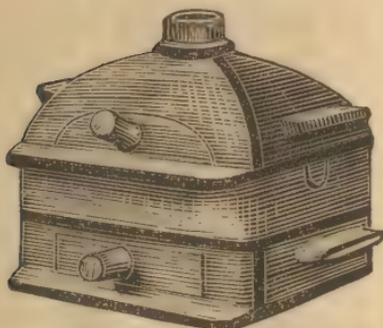

2361.—Ditto, Hibb's patent, of heavy cast-iron, lined with fire clay, with arrangements for the cupel muffle to extend through the center of the furnace, so the fire may extend all around it; has separate opening for tubes and retorts; it is supplied with water bath, sand bath, concentric rings, etc. A very highly esteemed and convenient furnace, as it may be used both for assay and heating purposes, and the muffle may be withdrawn at any time for examination. \$50.00

2362.—Ditto, Perrot's gas blast of sheet iron, with a thick lining of fire clay, as per sectional illustration. The blast is received underneath, and gas supplied to nine large Bunsen's burners, having the jets thrown to a common center; the supply of

gas is regulated by a hand crank. When in operation, the concentrated flame is forced up through an opening at the bottom of the furnace, and completely surrounds the crucible resting on a pestle of fire clay, enclosed in an inner wall of the same material, which soon becomes superheated to such an extent that five pounds of gold may be melted in the short space of eight minutes. This valuable furnace is also used by enamellers, jewelers, dentists, etc.

2365.—Ditto, gas, Griffin's, for chemical operations at a white heat; it is 2 feet high and 8 in. wide, consisting of a brass

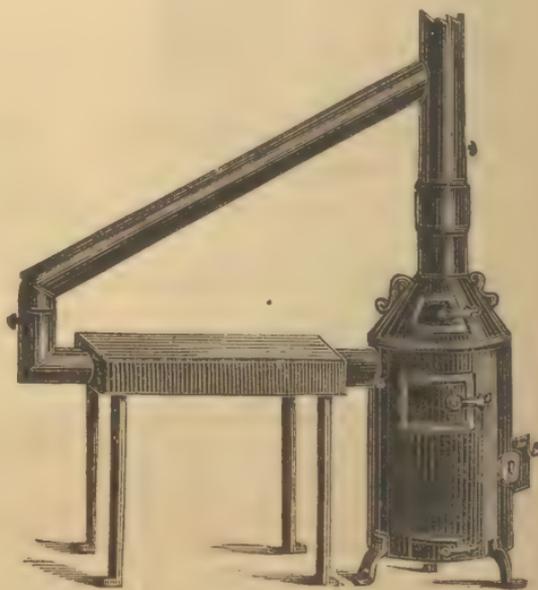

cylinder open at the bottom, at the top of which are 16 Bunsen's burners fixed, having a gas supply pipe regulated by stopcock. It rests on an iron stool, to which the chimney is attached by means of braces. The furnace itself is a cylinder of fire clay resting on a fire clay sole plate, which is pierced to receive the fire from the burner; it measures 6 inches in height, 8 inches outside diameter, and 5 inch bore. The crucible to be heated is supported on a perforated plumbago cylinder, and reaches within about an inch of the face of the gas burner. The dome, or roof of the furnace is carefully constructed so as to have a good draft; the consumption of gas when at work is 33 cubic feet an hour. \$20.60

Nos. 1
\$20.00

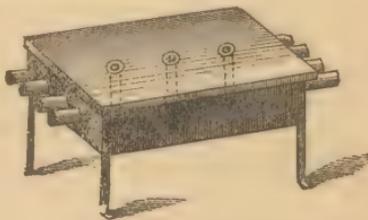

2
25.00 each.

2368.—Ditto, Chilton's universal, of heavy sheet iron, lined with fire brick, having moveable grate and ash box; it is so arranged

that the pipe above the furnace slides up and down so as to permit the top to be removed, and the deep iron sand bath accompanying the furnace, to be put in the place of it. A set of cast iron rings accompanies the furnace, and the doors are suitably stopped. It is a very convenient furnace for all the purposes of a laboratory, such as melting, distilling, evaporating, cupelling, etc. \$40.00

This is a first class apparatus, and will give an abundant supply for a large laboratory.

- 2400.**—Ditto, ditto, sulphuretted hydrogen, Babo's, consisting of two bulbs, with open mouth, united by a semi-circular tube, for the prompt supply of gas in small quantities. Price, mounted, \$2.50

The bulb, on the right of the illustration, is half filled with lumps of sulphide of iron; the other bulb is partly filled with diluted sulphuric acid; the apparatus being placed on the support, revolves on the center, and can be fixed by the thumb-screw in any required position; when the bulb containing the sulphide of iron is raised above the other bulb, the acid is thrown back into the right bulb, and its action on the sulphide of iron ceases; otherwise, when this bulb is placed below, the sulphuric acid flows upon the sulphide of iron, and a continuous current of sulphuretted hydrogen gas passes off by the bent, glass tube, into the washing flask, and thence outward. When the apparatus is not in use, it is simply necessary to elevate the bulb containing the sulphide of iron and close the pinchcock on the flexible tube.

- 2530.—Ice Freezer, Carré's apparatus,** imported only to order. \$150.00

It consists of a generator and receiver, made of iron boiler-plate, the receiver being conical in shape, both connected by means of a strong iron tube. In the generator is placed a strong solution of ammonia saturated at 0° , and this is heated over a large gas flame, the receiver meanwhile being immersed in the water. The liquified ammonia passes again into the gaseous state, and is re-absorbed by the water in the generator. But in this evaporation, great cold is produced, and the vessel of water is soon frozen. The ammonia going over can be used indefinitely.

- 2531.—Ditto, Hoffman's apparatus,** in glass, showing the principle of Carré's ice freezer. \$15.00

- 2534.—Indicator of Fire Damp, Electric.** 7.50

The large cup is filled with porous plaster of Paris, and is connected with the bulb-tube opposite to it (which contains a small quantity of mercury), by means of a brass tube. The top of the bulb has a screw cap to hold one of the electrodes. The other electrode is screwed to the base, and connects with large cup; when the porous cup absorbs the fire-damp gas, the mercury presses on the narrow tube, making connection with upper cup, completing the circuit, and ringing the bell.

Lactometers, milk. See Milk Assayers.

- 2581.—**Lactoscope**, Vogel's, or optical milk test, in wooden case. \$12.00

The above illustration consists of a vessel in a semi-circular brass frame and parallel glass sides, one-fifth of an inch apart. When this vessel is filled with a mixture of new milk and water, the appearance of the mixture is examined by placing a candle at a distance of three feet from one side of it, and the eye close to the other side; the presence of a certain proportion of cream renders the figure of the candle flame indistinct. The smaller the quantity of milk required to obviate the candle light the better is the quality of the milk. With the above comes a glass graduated vol cylinder on foot, with spout, and a graduated vol pipette. The manner of operating with this, showing the precise quantity of butter indicated in the milk, will be furnished with the instrument.

2641.—Magneto-Electric Apparatus, new invention, for firing the fuses, etc., in mine blasting. \$100.00

In this apparatus the armature *A A* is always in contact with the poles of the magnet *N, O, S*. It is supported by a piece of metal, *B M*, which turns around a horizontal axis, *a*; this piece presents a kind of handle, *B a*, having a knob at *B*, upon which one strikes with the finger in order to produce the withdrawing of the armature; thus, at the moment of this withdrawal, a first induction current is produced, passing contemporaneously with the movement which causes it, through the wire surrounding the extremities of the magnet. As long as one keeps the armature withdrawn from the magnet, the apparatus is inert; but as soon as one ceases to bear down on the button *B*, the armature, impelled by a spring which acts on the lever *a B*, drawn besides by the magnet, it turns instantly to the contact of the poles *N S*; a second current is produced in a contrary direction to the first, of equal intensity, as can be easily demonstrated with the galvanometer. There is also connected with the instrument a stop *X*, the employment of which holds the armature in a fixed position, so that it is impossible for electricity to pass. This instrument works in all weathers; and, while it is impossible to fire the fuse when the stop *X* is placed upon the armature, a simple withdrawal of the stop *X*, and a smart rap of the finger upon the handle *B*, will instantly fire a fuse by the electric current through a wire 500 to 600 yards in length.

3423.—No. 7. Five hundred gramme piece and down to 1 mgr., 3 riders.	\$28.00
3424.—No. 8. Five kilo. piece and down to 1 mgr.,	70.00

Gramme and Grain Weights, No. 2.

3425.—Hundred gramme piece and down to 1 mgr.	9.00
3426.—Ditto, ditto, " 10 "	4.50
3427.—Fifty gramme pieces and down to 1 mgr.	9.00
3428.—One kilo. and down to 1 gramme, in mahogany case.	7.00
3429.—Five hundred gramme piece and down to 1 gramme, in mahogany case.	\$5.75
3430.—One thousand grain piece and down to $\frac{1}{100}$ grains, 3 riders	\$18.00
3431.—One thousand grain piece and down to $\frac{1}{100}$ grain.	9.00
3432.—Ten ounces troy, with decimal subdivisions, down to $\frac{1}{10000}$ ounce.	\$14.00
3433.—Sets of assay ton weights of 4 A. T. down to $\frac{1}{25}$ A. T.	6.00

(The assay ton weights have been introduced by Dr. C. F. Chandler, of the School of Mines, Columbia College, New York, where they are in use for convenience in the assay of ores. The weight denominated by Dr. Chandler "One A. T.," equals 29,1666 grammes, and contains, consequently, as many milligrammes as there are troy ounces in a ton avoirdupois of 2,000 lbs. Therefore, if One A. T. of ore assays 1 milligramme, the ton contains, of course, 1 ounce troy.)

Apothecary Weights, in mahogany boxes, lined with velvet.

- 3434.—No. 1. One troy ounce down to $\frac{1}{4}$ grain. \$2.75
 3435.—No. 2. 1000 grains and down to $\frac{1}{16}$ grain. 7.00

Troy Ounce Weights, of Brass Lacquered, in mahogany boxes, lined with velvet.

- 3436.—No. 1. One ounce and down to $\frac{1}{4}$ grain. \$2.75
 3437.—No. 2. Two two-ounce pieces and down to $\frac{1}{2}$ grain. 5.75
 3438.—No. 3. Five-ounce piece and down to $\frac{1}{2}$ grain. 7.00
 3439.—No. 4. Ten-ounce piece and down to $\frac{1}{2}$ grain. 9.00
 3440.—No. 5. Two twenty-ounce pieces and down to $\frac{1}{2}$ grn. 14.00
 3441.—No. 6. One fifty-ounce piece and down to $\frac{1}{2}$ grain. 18.50
 3442.—No. 7. Two 100-ounce pieces and down to 1 grain. 28.00
 3443.—No. 8. Two-hundred ounce piece and down to 1 grn. 38.00
 3444.—No. 9. Two 500-ounce pieces. 48.00

All the weights in the above list are adjusted according to the French standard and the ounce troy—31,10333 grammes.

- 3445.—**Weights**, sets of fractions of millegrammes, accurately balanced. Each, \$2.50

- 3446.—Ditto, French, brass, $\frac{1}{2}$ to $\frac{1}{16}$ oz. \$1.50
 3447.—Ditto, ditto, mahogany boxes, 50 grammes down. \$3.00

 3452.—Ditto, subdivision of grammes. .50
 3453.—Ditto, from 1 lb. avoirdupois, down to $\frac{1}{4}$ oz. \$4.50
 3454.—**Wire**, brass, for making scratch brushes, etc.; No. 20 up to No. 40. Per lb. \$3.00 to 5.00
 3455.—Ditto, copper, $\frac{1}{16}$ in. Per lb. \$2.00
 3456.—Ditto, silk wound. “ 3.00
 3457.—Ditto, copper, silk wound, for making Ruhmkorff’s coil and other electrical apparatus. Per gramme, .12
 3458.—Ditto, piano, for blow-pipe experiments. Per lb. \$1.50
 3459.—Ditto, magnesium. Per foot, .06
 3460.—Ditto, gauze of copper, according to fineness. Per sq. ft., .50 to \$1.00
 3461.—Ditto, brass. “ .40 to .90

3462.—Wire, iron, price according to fineness.

3463.—Woulff's Apparatus, for washing Gases.

8 oz.	16 oz.	qts.
\$5.50	6.60	8.00

3463

3464.—Ditto, with lamp.

8 oz.	16 oz.	qts.
\$10.00	12.00	14.00

Wurtz' Apparatus, for Fractional Distillation. See Distillation.

3465.—Woulff's Apparatus, with gas bottles instead of flasks, and dispensing with lamp and stand. \$4.00 to 6.50

3466.—Zinc, Filings. Per lb. .25

3467.—Ditto, Sheet. " .20

3468.—Zincs, for bichromate batteries, cast. .25 to \$3.00

3469.—Ditto, for Bunsen's batteries, heavy rolled. \$1.50 to 3.00

3470.—Ditto, for Daniell's. .75 to 1.50

3471.—Ditto, for Grove's or Smee's, cast. Per lb., .18

CHEMICALS AND REAGENTS.

THIS List comprises the majority of Chemicals I keep, though there are a number of strictly commercial articles that usually rank under the head of Chemicals, which are omitted, but which I have the fullest facilities for shipping at the lowest market rates.

The prices given are for usual quantities. If large amounts of any article herein priced are desired, I should be pleased to give the benefit of the lowest market quotations, according to the market values at the time.

I have frequently procured Crude Stock Chemicals, Drugs, and other articles for class illustrations in Organic and Applied Chemistry, for my patrons at a distance, and will take pleasure in serving them in this manner in the future, charging only a small per centage for my time and trouble.

Standard Test Solutions, according to Fresenius and other authorities, carefully prepared to order at moderate rates.

Great attention is paid to neatness, cleanliness and accuracy in dispensing reagents.

Complete collections of the elements made and arranged on demand; also suits of the principal spectroscopic salts, neatly put up in glass stoppered vials, for either class illustrations or Laboratory purposes.

MINERALOGICAL

AND

GEOLOGICAL DEPARTMENTS.

DURING the past year, I have organized and incorporated into this establishment a Mineralogical and Geological department. My aim and desire is to furnish to those requiring them, *characteristic*, and, at the same time, *Good Cabinet Specimens*, for lecture and other purposes, at *moderate prices*; also, the usual sets and series for Students' use, Blow-pipe purposes, etc. Each specimen, without regard to size or price, will be distinctly labeled with full name and locality. Dana will be followed in all instances.

MINERALS.

3473.—A Complete Set of Minerals, with pasteboard trays for placing them in, each specimen being perfectly characteristic and illustrating all the ordinary crystalized forms in which they occur. In all, 200 specimens; size about $2\frac{1}{2}$ x $2\frac{1}{2}$ inches. This series will be found to be very suitable for academies, seminaries, the smaller colleges, etc. \$50.00

3474.—A Collection similar to the above, but more complete, containing 300 specimens, $2\frac{1}{2}$ x $2\frac{1}{2}$ inches, neatly and securely packed in wooden boxes; each mineral being numbered, with catalogue or same. This collection is put up and selected by a practical and experienced mineralogist, and will be found quite complete.

Packed, \$75.00

COLLECTION OF THE PRINCIPAL ORES OF THE METALS.

<i>Aluminum</i> —Cryolite, Alunite, Kaolin.	<i>Lead</i> —Galena.
<i>Arsenic</i> —Arsenical Iron.	<i>Manganese</i> —Pyrolusite.
<i>Bismuth</i> —Carbonate Bismuth, Native Mett.	<i>Mercury</i> —Cinnabar.
<i>Chromium</i> —Chromate of Iron	<i>Molybdenum</i> —Molybdanite.
<i>Cobalt</i> —Zaffre.	<i>Nickel</i> —Nicoliferous Pyrites.
<i>Columbium</i> —Columbite.	<i>Osmium</i> —Iridosmine.
<i>Copper</i> —Sulphide, Malachite, Native.	<i>Platinum</i> —Native Grains.
<i>Glucinum</i> —Beryl.	<i>Silver</i> —Horn Silver.
<i>Iron</i> —Magnetic Oxide Hæmatite.	<i>Tin</i> —Stream Tin, Sulph. Tin.
<i>Lithium</i> —Spodumene and Le- pidolite.	<i>Titanium</i> —Sphene, Rutile.
	<i>Tungsten</i> —Tungstate Iron.
	<i>Yttria</i> —Yttrotantalite.
	<i>Zirconium</i> —Zircons.
	<i>Zinc</i> —Calamine, Blende.

Price of this collection, \$15.00 to 25.00

3475.—Set of 100 Minerals, of the most commonly occurring forms, neatly packed in pasteboard trays, etc. \$15.00

3476.—Collection of Chemical substances, for beginners in Blow-piping, put up in tightly corked and correctly marked Homeopathic vials, of two drachms capacity, all C. P. Recommended by Kobel. About 50 in all, \$7.00; about 25, \$3.50

This includes a specimen of all the ordinary metals in a pure state for experimental reduction with Blow-pipe.

3477.—Blow-pipe Reagent Cases, for prospectors, mineralogists, travelers, etc.; consisting of Berzelius's Blow-pipe, with Platinum tip, Platina wire and foil, pair Pincettes, and ten of the most useful dry Blow-pipe Beagents, as follows: Borax, Boracic Acid, Oxide, Copper, Carbonate Soda, Microcosmic Salt, Fluoride Calcium, Sulphate Lime, Silicic Acid, and pure Tin. All complete, in an elegant polished mahogany case. \$7.00

3478.—The same, with the addition of one Agate Mortar, one Mineral Hammer, one Anvil, three pieces of Charcoal, six glass Tubes right size for making Blow-pipe Flasks, three glass Stirrers,—heavy glass Spirit Lamp, and four glass stoppered bottles filled with Hydrochloric, Nitric, Sulphuric Acids, and Cobalt solution. \$12.50

3479.—Ditto, ditto, ditto, with Plattner's Blow-pipe Lamp instead of Spirit Lamp. \$3.00 extra.

3480.—A Collection of minerals of most excellent size, and of a character suitable for placing on the shelves of the College Cabinet, at the uniform price of 50 cents per specimen, averaging about 3x3 inches in size. These minerals were collected by a well known mineralogist of this city, and each specimen is a perfect example of its kind. They are not completely classified, and, therefore, I will sell them singly at an extremely low figure. Some of these, for example, Kyanite, Tourmaline, Zinc Ores, etc., are really deserving of very much higher prices. The greater part of this collection is from American localities.

3487.—I have a few superior specimens of that curious variety of Quartz Rock, termed Itacolumite. The shape and size of these fine examples of this mineral are just right exactly, for class exhibition, viz.: in sawed slabs, about eight and one-half inches long, two inches wide, and one and one-eighth thick. Price, each, \$2.00

3488.—A very Complete and well arranged cabinet of good sized specimens of minerals, intended for the use of Blow-pipe students and public schools, put up in sections of about fifty minerals, each section enclosed in handsome case, with movable top, with numbered catalogues. Per section, \$6.00

3489.—Ditto, ditto, consisting of full series of Rocks, of the various formations, arranged in accordance with Dana's System of Geology, with catalogue. For section of 50 specimens each, \$5.00; 10 sections, \$40.00.

3490.—A Set of Minerals, illustrating Cleavage:

- | | | |
|----------------|----------------|-------------------|
| 1. Galena, | 7. Felspar, | 13. Sulphur, |
| 2. Idocrase, | 8. Calcite, | 14. Pyromorphite, |

| 5. Gypsum, | 11. Tungsten, | 17. Iceland Spar, |
| 6. Hornblende, | 12. Limonite, | 18. Rutile. |

Complete, in pasteboard case, \$10.00

3491.—**A Suit** of the various varieties of Mineral Oils, six specimens in all, put up in clear flint sample vials, for exhibiting to students the natural properties, color, etc., of petroleum, as found in the several localities of the United States. These samples range in specific gravity from 26 deg. Beaume to 50 deg. Beaume. \$5.00

3492.—**Minerals**, chiefly American, unclassified; size about $2\frac{1}{4} \times 2\frac{1}{4}$; excellent for completing amateur collections; all picked specimens; at the uniform price of, each, .25

The Calcite and Aluminous series in this selection are very well assorted, and are quite complete. Included in it are some specimens of that curious quartzose crystalization, from Bohemia, termed there, Kapp-Stein.

3493.—**I have** on sale a collection of Lava and Volcanic Tufa, which is, I think, worthy of considerable attention. It is a full series, from the various volcanoes in the Sandwich Islands, and was collected by Commodore Wilkes, in 1848, when there. It would be an exceedingly interesting addition to any college or private collection, possessing as it does also, great historical interest. Twenty specimens in all. \$10.00

3494.—**A Suit of Colorado Minerals**, including all of the ores and minerals found in this great mineral-bearing Territory. This is a quite unique and interesting little collection, suitably labeled and arranged in fine pasteboard case, with partitions and movable top 50 in all. Price, \$6.00

ELEGANT AND RARE CABINET SPECIMENS.

This part of my collection I am giving great attention, and assure my patrons that nothing under this head will be found incomplete. Included in it I may mention some extraordinarily fine and beautiful specimens of Agate, finely polished.

3495.—**Splendid Falherz Specimens**, from Germany.

3496.—**Magnificent Fluors**, from Derbyshire and Cumberland, England.

3497.—**Elba Iron Ores**, Götite, etc., of perfect beauty and size.

3498.—**That very Rare and Exquisite**, as well as wonderful, production of oceanic life, called "Venus' Flowing Basket," or "Euplectella Speciosa," found 60 fathoms deep near the Phillipine Islands,

and for a specimen of which Cummings, the great English naturalist paid, in London, £30 only six or eight years ago. \$5.00 each.

3499.—A Complete Set of Fossiliferous Rocks, of about 4 x 4 ins. in size, illustrative of the geological formations of New York. All of the New York groups and periods are fully illustrated with specimens from the principal localities in that State. Each specimen and group is characterized by its distinctive fossil or fossils. This collection of rocks has received the great approval of all the colleges who have purchased it, and is certainly deserving of notice, not only on account of its having been obtained entirely from New York State, but, also, for its completeness. It is believed to be the only collection of the kind ever put on sale in this country, and will be found to be eminently well adapted for teaching Dana's Geology in colleges, schools, etc. Carefully labeled with name of group, fossil, etc. 55 specimens in all. \$25.00

3500.—There are left at my disposal two Cabinet Collections of Minerals, belonging to gentlemen of the highest standing in the world of science, but who, for private reasons, wish to dispose of them.

Selected with rare taste and perfect mineralogical knowledge, through a long series of years, each specimen of these collections will be found to be unique examples of their class, and every class most fully illustrated. They have been gathered together from the most celebrated localities of the world, and contain specimens valued at \$250 to \$300 each.

This is a rare opportunity for colleges. Price, \$3,000 to 6,000

3501.—A Case of German Minerals, beautifully arranged, in an elegantly polished wood case, with drawers, containing 200 minerals, carefully wrapped for transportation, and completely classified and labeled; size of specimen averages about $1\frac{1}{2}$ x 2 inches

Price, with case included, \$25.00

This case would make a very useful and handsome holiday present.

3502.—The same, as above, in all respects, except containing 150 minerals instead of 200. Price, \$20.00

3503.—The same, as above, in all respects, except containing 100 minerals instead of 150. Price, \$15.00

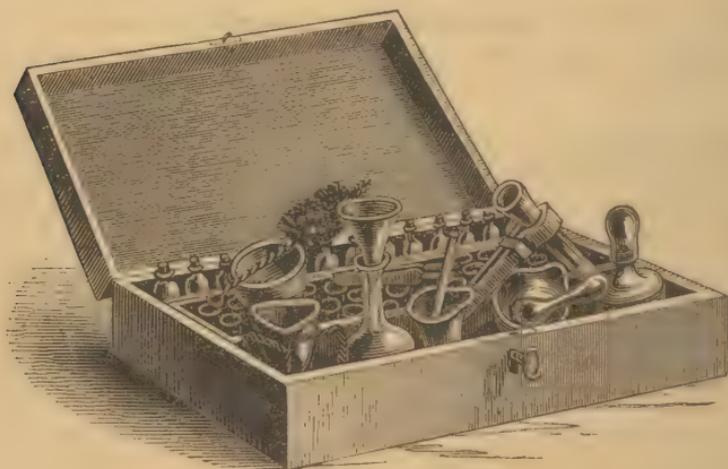

For the remainder of this department reference may be had to a separate Catalogue of Ward's Plaster Casts.

3504.—Set of Apparatus and Chemicals, for fifty initiatory experiments for boys and girls, with directions for using. These are packed in a neat wooden box, with compartments and hinged lids, and consists of the following articles. Price \$10.00

APPARATUS.

- | | |
|----------------------------------|--------------------------------------|
| 1 Glass Flask, 1 oz., | 3 Test Papers, 1 each color, |
| 1 Small Sand Crucible, | 50 Small Filters, cut, |
| 1 Shallow Sand Bath, 2 in., | 1 Jeweller's Blow-pipe, |
| 1 Small Porcelain Crucible, | 1 Corrugated Funnel, 2 in., |
| 1 Glass Mortar and Pestle, 2 in. | 1 Porcelain Evaporating Dish, 3 in., |
| 2 " Stirring Rods, | 1 Piece Tin Foil, |
| 1 " Spirit Lamp, | 1 " Rubber Tube, |
| 1 Small Tripod, | 1 Pair Iron Pincettes, |
| 1 Test Glass, with lip, | 3 inches Copper Wire, |
| 4 Test Tubes, | 3 " Iron " |
| 2 Test Tube Holders, | 2 ft. Magnesium Ribbon. |

3533.—Apparatus, for illustrating Hinrich's Elements of Physics.

For exclusive use in the Lectures (see School Laboratory, 1871, p.66), the teacher should procure as much as possible of the larger apparatus and finer specimens of crystals, minerals, etc., mentioned in the work. No general directions can here be given; the wants and means of the school will have to be consulted in making out the order. The teacher ought, however, always to give the precedence to the apparatus to be used by the students in the Laboratory Practice, if the means of the school do not permit the purchase of this necessary apparatus and the more costly apparatus also. This simple apparatus required for the demonstration of the Fundamental Laws of Electricity (see 341 to 372), is more important to the student, and therefore to the school, than the more expensive and more powerful machines (373 to 380); that is, the simple apparatus for students' experiments must be obtained first; the fine electrical machines and batteries should thereafter be procured as soon as possible. The necessary apparatus for Student's Laboratory Practice is divided into two distinct groups, viz.: I. Apparatus placed at convenient points in the Laboratory, to be used by students in general; II. Sets of Apparatus, put up in a separate tray, of wood or pasteboard, sufficient to demonstrate any given article in the book. (See article 492 in the Elements of Physics.)

Every piece of apparatus should be labeled. (See *El. Phys.*, 495-'96.) Below, the principal fixed apparatus for general use is enumerated. A few sets for the demonstration of separate articles have been added, simply to serve as examples. A full enumeration of all the sets required would demand too much space.

3549. Apparatus, for Demonstration of Oxygen, Hydrogen and Water, consisting of U Tube, mounted on stand, supplied with Stop-cock Delivery Cock and Glass Worm, complete.....\$15.00

3550. Ditto, for ascertaining the exact proportions of Hydrogen and Nitrogen in Ammonia, unmounted.....\$3.00

3551. Metallic Supports for the above, and other similar apparatus, each.....\$4.00

3552. Hoffman's Apparatus, for the Demonstration of Proportion, at volumes of Water, Hydrochloric Acid and Ammonia, consisting of U Tube with Stop-cocks at top, Pinch-cock at bottom, with Platina Electrodes, mounted on stand, No. 913.....\$10.00

3553. Ditto, ditto, for the Determination of Chlorine Water, consisting of U Tube, with fine ground glass Stopper at the top, and having also Platinum Electrodes on arm, No. 259, mounted.....\$7.00

3554. Ditto, ditto, for the Testing of Sulphuric Acid, consisting of a long glass vessel or bottle, into the neck of which is ground stoppered with fine emery, a Glass Tube running about half way down the bottle, and bent at right angles at the top. Out of the shoulder of this bottle projects a Tube, having two fine ground glass Stop-cocks, with a bulb between them; the whole is firmly fixed by a cork into a strong cylindrical glass receptacle, having a flat bottom.....\$7.50

3555. Ditto, ditto, Four Burners, mounted on one stand, each Burner about 2 inches apart.....\$7.50

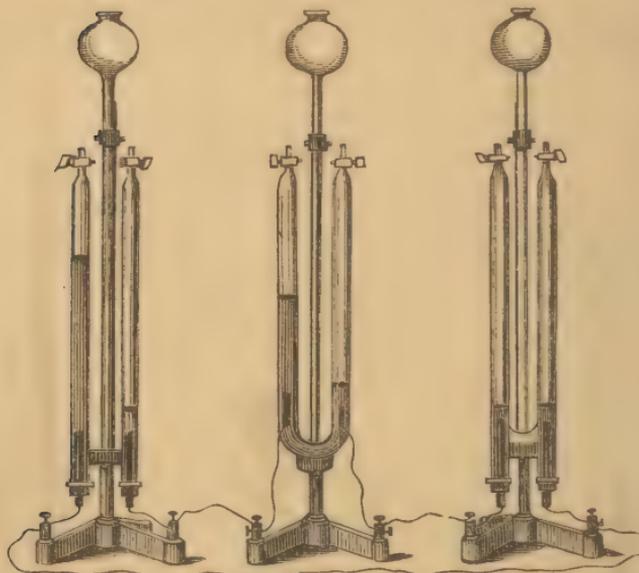

1755. Hoffman's Watch Glass Clamps, each..... .20

3556. Hoffman's Apparatus, for the Decomposition of Water, consisting of three Way Tubes, with two glass Stop-cocks for delivery and one large bulb in the Supply Tube, with Platinum Electrodes sealed in and communicating with the strips of Platinum Foil, unmounted.....\$6.50

3557. Ditto, ditto, ditto, mounted.....\$10.00

3558. Ditto, ditto, with Charcoal Points for the Electrolysis of Hydrochloric Acid and Ammonia, mounted.....\$15.00

3559

3559. Apparatus, for Volumetric Electrolysis of Carbonic Acid Gas, Water and Ammonia, through one Electric current, consisting of two Three Way Tubes with two glass Stop-cocks with Carbon Electrodes and one Three Way Water Decomposing Apparatus, each separately mounted, with special Binding Screws. All the above having large glass Bulbs. \$30.00

3560. Ditto, ditto, for the Arrangement of Combustion Experiments, consisting of a large glass Tube drawn at the upper end and bent at right angles, into which is secured a glass Stop-cock, connecting with a rubber Tube delivery into the lower or open end is fitted, by means of a rubber stopper, a tube of medium width, into which is secured a glass Stop-cock tube with a burner of Platinum Foil in the end. There is also a blowing tube, bent at right angles, fitted into the same rubber stopper. \$10.00

3561. Hoffman's Apparatus, for showing the principle of Carré's Ice Freezer, by producing ice from water by the employment of Ammonia. \$15.00

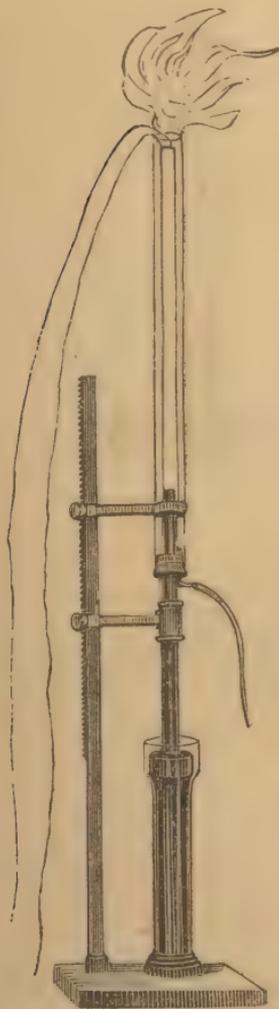

3562. Ditto ditto, for the condensation of the Elementary Gases, Hydrogen and Oxygen, in water, at boiling temperature, as well as for Eudiometric Analysis of the Fire Damp and the oil forming gases (as per Hoffman's Modern Chemistry, Fourth Edition; also per Records of the German Chemical Society, 2d Vol., p. 245), consisting of an Iron Stand with Toothed Bar, in which is secured a long glass tube, supplied with Platinum Electrodes, and fastened in a brass support, which can be easily moved up and down. \$30.00

3563. Ditto, ditto, for burning Sulphur by the Electric Current, demonstrating equal volumes of Oxygen and Carbonic Acid Gas, also Sulphurous Acid formed from it; consisting of an U shaped tube, with a large bulb near the top, which is stoppered with a two-holed cork, and provided with a Waste-cock. In each hole in the cork is a wire fastened, one of which is provided with a small spoon to receive Carbon, or Sulphur. The upper ends of the wire are supplied with Binding Screws. (See illustration, p. 236.) \$12.50

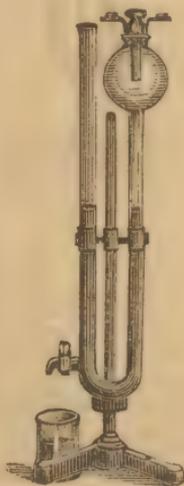

3564. Ditto, ditto, to observe the ratio of volume of Simple and Compound Gases under the influence of pressure and changes in the temperature (Per Hoffman's introduction to his work on Modern Chemistry, and Records of the German Chemical Society, 2d Vol., p. 257), consisting of a long U formed glass tube, ending in four vertical branch tubes in the shape of a fork and supplied with glass cocks. The apparatus is carefully held in place by a nicely constructed support, which sustains four glass cylinders, fastened in

3565. *Hoffman's Steam-Tight Determination Apparatus*, consisting of a Barometer Tube, 1 Meter long, graduated in $\frac{1}{2}$ Centimeters, and secured with a middle sized cork into a middling wide encasing tube. The latter is drawn small at the top, in a right angle, which terminates in a boiling vessel, supported on an iron stand, over a lamp flame of 3 tubes. Out of the lower end of the encasing tube runs a tube connecting with a condensing tub. The graduated tube descends into a Mercury trough, out of which also runs a measuring tube, graduated by a "Nonius" graduating screw, showing the volume by the pressure of the quicksilver.

plete, ready to set into brick. The condensation of steam takes place in the cooling tub, generally; a large Sand Bath accompanies the apparatus, which can be heated at the same time and with the same fire in the hearth, in which case the cooling tub must be placed elsewhere. The length of this apparatus is 6½ feet, depth 3 feet. The separate parts of this apparatus are: 1 Copper Steam-boiler, tinned inside; 1 Cooling Tub with cover and level tubes; 1 Filling Funnel; 2 large Caps with ball Stop-cocks; 5 small ditto; 1 Tin Alimentary Feeding Tube; Glass Water Gauge; Copper tinned Steam Drying Box, with 15 compartments; 1 Steam-pipe, running from the Steam-boiler to the Drying Box; 1 ditto, to the Cooling Tub from the Drying Box; 1 Winding Tube; Detaining Pins; Filtering Funnel, with Binding Tubes; 3 Intermediary Stop-cocks on the Steam-pipe; 3 Dogshead Stop-cocks for the Steam-boiler; Drying Case; Cooling Tub; Steam-boiler Plate (2 entire); Pedestal for the Cooler; Board for the Drying Case; 2 Props for ditto; Fish-bellied Roast, etc., etc.

MÜRRLE'S DISTILLING APPARATUS. imported only to order. (For description, see pp. 235, '36.)

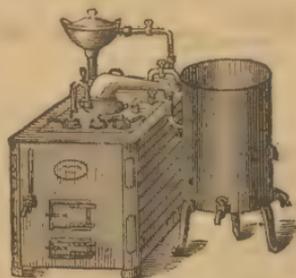

3566

3567. Distilling Apparatus, with Adjuncts, according to Dr. Mohr, consisting of: 1 Distilling Alembic of 2 gals.; Water Jacket, Steam-pipe, Neck; Angular Condensing Tubes; Steam-pipe, with Transverse Stop-cock; Condenser for distilling water; large and small Detaining Pins; Alimentary Feeding Pipes; 2 Apparatus Boxes of 24 oz.; 1 ditto, of 12 oz.; 1 ditto, of Emilian shape, of 24 oz.; 2 Faucets; Steam-pipe, with Intermediary Stop-cocks from the Cap into the Steam-pipe which conducts the distilled water into the Cooler; Casseroles, with cover, $3\frac{1}{2}$ qts.; ditto, of Emilian, of 2 qts.; 2 Intermediary Stop-cocks; 2 Dogshead Stop-cocks on the Steam-boiler and

3567

3568

Cooling Tube; 1 little Stop-cock on the Cap; Brass Connectors, hermetically sealed on the Apparatus, Tubes and Faucets; Copper Steam-boiler of 30 qts.; Cooling Tub of 125 qts.; 2 level Tubes with Funnel; Glass Water Gauge; Cap of one of the Evaporating Dishes; Front Plate; Covering Plate; Side Frame; Hot-air Passage; Fish-bellied Roast; Iron Steam-boiler Plate; Little Ring Plates on the Cap; Wooden Pedestal; Knob, Feet and Binding of the Crank Hands; Brush, Plaster Model, etc.

3568. Distilling Apparatus, Dr. Mohr's, together with 1 Dry Box, 1 2-gal. Still, Water Jacket, Steam Tube, Neck, Angular-shaped Worm, Steam Tube, with Intermediary Stop-cock; Worm for distilling water; Alimentary Feeding Pipe; 2 Apparatus Boxes, *a*, 24 oz.; 1 ditto, of 12 oz.; 1 ditto, Emilian, of 24 oz.; 2 Faucets; Steam Pipes, with Intermediary Stop-cock, running from Steam-boiler to the Cooling Tub and Drying Box; little Stop-cock on Cap; Brass Connectors, hermetically sealed; Steam-boiler, of copper, of 39 qts.; Cooling Tub of 125 qts.; 2 Level Tubes, with Funnel; Glass Water Gauge; Cap of one of the Casseroles; Steam Drying Box, with two compartments with two perforated shelves; Front Plate; Covering Plate; Side Frame; Hot-air Passage; Fish-bellied Roast; Iron Steam-boiler Plate; Wooden Pedestal; Little Ring Plates on the Caps; Knob, Feet and Binding of the Crank Handle; Brush, Plaster Models, etc.

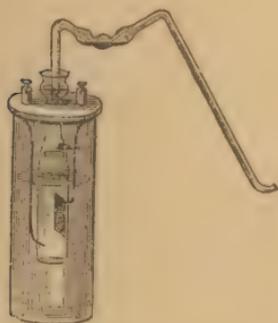

3569 is of a construction similar to 3568, only with *smaller dimensions*, its depth being a space of 2 ft. 4 in., and, in its front, inclusive of a space under the Cooling Tub (to place Flasks) is 4 ft. 5 in., and it consists of 1 Distilling Alembic, with Cover, of 6 qts.; Water Jacket; Steam Pipe, with Intermediary Stop-cock; Cooling Tubes for distilling water; 2 Detaining Pins; Alimentary Feeding Pipe; 2 Apparatus Boxes of 12 oz.; 1 ditto of 6 oz.; 2 Faucets; Steam Pipe, with Intermediary Stop-cock, from the Cap into the Steam Pipe which conducts the distilled water into the Cover; Casseroles, with Cover, of 1½ qts.; 2 Intermediary Stop-cocks; 2 Dogshead Stop-cocks on Steam-boiler and Cooling Tub; little Stop-cock on Cap; Brass Conductors, hermetically sealed; Copper Steam-boiler of 18 qts.; Cooling Tub of 60 qts.; 2 Level Tubes, with Funnel; Glass Water Gauge; Cap of one of the Casseroles; Front Plate; Cooling Plate; Fish-bellied Roast; Steam-boiler Plate; Pedestal on the Tub, with Stationary Screw; Knob, Feet and Binding of the Crank Handles; Brush, Plaster Model, etc.

In addition to the foregoing illustrated styles, I have facilities for importing others similar in character.

3572. Ditto, Regulator, Kemp's, ordinary.	3.50
2413. Ditto, with Bunsen's new improvement.	4.00
2407. Gas Tubes, registered in cubic Centimeters.	\$1.25 to 2.50
2418. Ditto, 5 cubic inches, in tenths, each.	1.75
2417, 18. Ditto, or Absorption Tubes, lipped, in Millimeters.	\$1.75 to 2.50
1407. Ditto, Syphon Barometer, engraved scale, with support.	15.00
3572. Apparatus , for the Determination of Sulphur by Chlorine.	7.50
3573. Ditto, for preparing Nitrogen by Chlorine and Ammonia, consisting of Glass Flask, Receiver, Delivery Tubes, Support and Burner.	\$7.50
3574. Ditto, for the Determination of Nitrogen, after Dumas.	15.00
3575. Ditto, for preparing Nitrous Oxide, consisting of Gas-burner or Lamp, Woulff's Bottle, Gallows Screw Connector, fitted with Mouth-piece and Stop-cock, bent Tube with Connector, Pint Retort and Receiver, and Lamp Stand of iron.	\$12.00
3576. Ditto, for combining the Gases requisite for forming Exhilarating Gas, consisting of Bell and Receiver, each with ground edges, between which is placed a Plate of Glass, ground on both sides.	\$2.50
3577. Ditto, for generating Chlorine Gas, consisting of Lamp, Pneumatic Cistern, Iron Stand, Flask, Sand Bath, etc.	\$10.00
3578. Ditto, Deflagrating, for making Anhydrous Phosphoric Acid by burning Phosphorus in Oxygen.	\$3.50
3579. Ditto, consisting of Carboys of Earthenware, with Filter for generating Chlorine.	

- 3580.** Apparatus for preparing Nitrogen by burning Phosphorus in air, \$3.50
3581. Ditto, to illustrate the Diffusion of Gas..... 2.00
 2189. Ditto, for showing Endosmosis..... 1.50
3582. Ditto, to illustrate the Formation of Chloride of Ammonia by condensing the vapors of Hydrochloric Acid and Ammonia, consisting of a Glass Flask holding one gallon, to which are attached two Tubes by means of an India Rubber Connection.....\$2.50
3583. Ditto, for making Chloride of Sulphur, consisting of two tubulated Receivers, Chloride of Calcium Tube, Bulb Tube, Gas Flask, etc., after Mitscherlich.....\$7.00
3584. Ditto, Mohr's Ether Extraction.....\$8.00
 (See also list of Hoffman's Apparatus.)
3585. Ditto, Bunsen's, for obtaining pure Hydrogen Gas..... 6.50

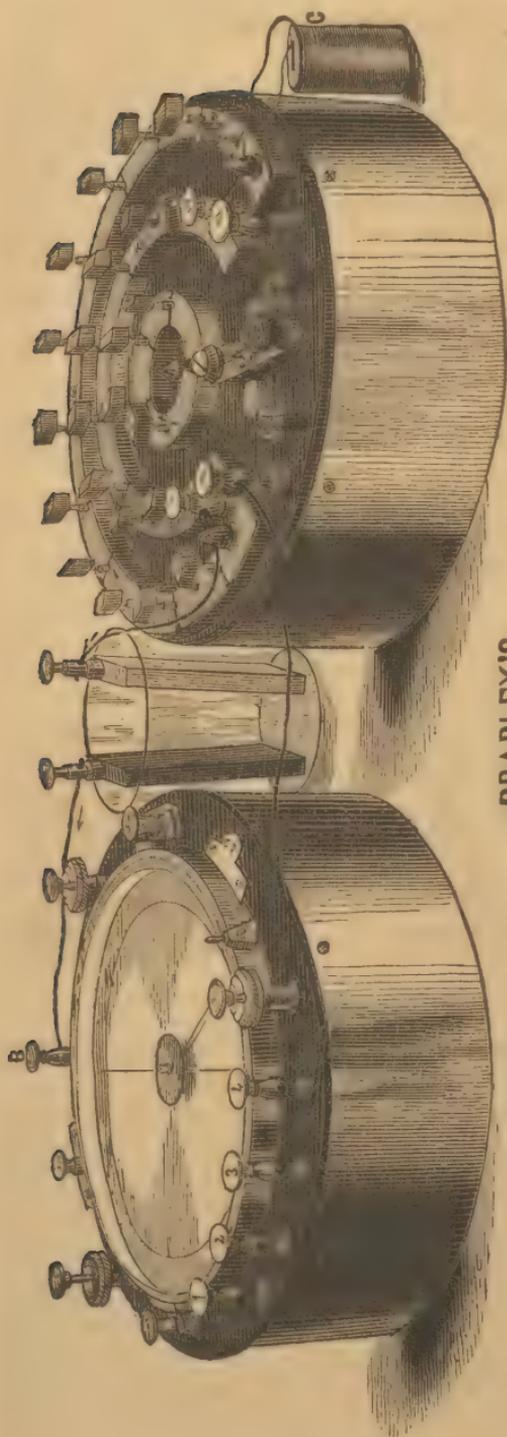

3585

3586

- 3586.** Ditto, ditto, for obtaining pure Oxhydrogen by the Decomposition of Water.....\$6.50
 2419. Porcelain Apparatus, for Washing Gases, consisting of two deep Porcelain Dishes, fitting into each other with concentric Chambers, Receiver and Vent.....\$5.00
 3463. Woulff's Apparatus, for Washing Gases, 8 oz..... 5.50

**BRADLEY'S
APPARATUS FOR
ELECTRIC MEASUREMENT.**

3570

3570. Bradley's Apparatus for Electric Measurement, for accurately determining the electro-motive force, resistance and strength of batteries. For directly measuring the resistance of all conductors of electricity, telegraph wires, etc., from the $\frac{1}{100}$ of an ohm to $\frac{1}{1000}$ ohms. For determining the insulation resistance of telegraph lines up to millions of ohms. For locating breaks, faults and crosses on telegraph lines, cables, etc. For determining the quantity of metal of any kind deposited in a given time in the process of electroplating, gilding, etc.

For determining the specific conductivity of metals, especially of copper, a matter of great importance to those manufacturing or using wire for telegraphic or other electrical purposes, and in short, the capacities of all other instruments for similar purposes combined are embraced in this one, in a substantial and compact form, convenient for transportation, and comparatively safe from injury. Its operations are exceedingly exact, and in no wise complicated or difficult. Descriptive Pamphlets may be had on application.

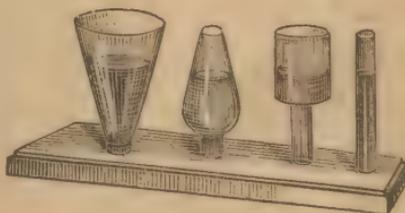

Price, each, \$200

APPARATUS FOR HEAT.

3587. Apparatus, for showing Specific Heat.....	\$5.00
1898. Conductometer.....	2.50
3588. Apparatus to show Spheroidal State of Liquids, as per No. 52 of Tyndall, on Heat.....	\$2.00
3589. Trevelyan Rocker, according to Tyndall, Fig. 27.....	6.00
3590. Straight Roller, Electrical, according to Tyndall, Fig. 30.....	8.00
3591. Elliptical Roller, according to Tyndall, Fig. 31.....	10.00
3592. Apparatus, to show Influence of Pressure at Boiling Point, Fig. 35.....	\$8.00
3593. Ditto, showing Development of Heat by Compression of Air, Fig. 13.....	\$4.00
1779. Bunsen's Furnace, for Organic Combustion, imported, 25 Burners.....	60.00
1780. Ditto, domestic, 25 Burners.....	50 00
3594. Ditto, 18 Burners.....	40.00
1781. Ditto, 10 Burners.....	30.00
3595. Sefstrom's Chemist's Forge, imported to order.....	175.00
1476. Blow-table and Blast-pipes.....	40.00
1778. Liebig's Combination Furnace, 24 in., \$3.25; 18 in.....	2.25

3638. Ditto, ditto, without Lenses and small Reflector.....	30.00
1679. Ditto, Pencils, per inch.....	.06
3639. Spectroscopes, Duboseq's, imported to order.....	210.00
3139. Ditto, Browning's, 2 Prisms.....	160.00
3138. Ditto, Heidelberg, single Prism, with 2 Lamps, 2 Holders, 12 Platina Ends.....	\$65.00
3136, '37. Ditto, Browning's, Hand.....	\$15.00 to 18.00
1728. Charts, showing the Spectra of Metals and Stars, translated into English, each.....	\$3 50
3257. Merk's Telescope, High Power, with Strap for mounting on Stand.....	\$30.00
2681. Gundlach's Microscope, 2 Eye-pieces, 5 Objectives, with Slides, etc., all in an elegant, highly polished case; a very superior article, complete.....	\$200.00
2680. Nacht's Compound Microscope, French.....	20.00
2678. Ditto, ditto, ditto, ditto.....	15.00
2682. Accurate Solar Microscope, complete, in fine box, hinged Cover, etc.....	\$200.00
1768. Collection of Rare Specimens, for Spectral Analysis, with Platinum Wires on Glass Foot, and Stands to hold them, with Sliding Box.....	\$7.50
2630. Watchmakers' Lenses.....	2.50
1769. Collection of Objects, for Solar Microscope, mounted.....	25.00
1871. Microscopic Covers, Circles, very thin, per ounce.....	4.00
1872. Ditto, ditto, Squares, per ounce.....	3.00
2637. Ditto, Slides, assorted, per doz.....	.50
2629. Camera Lens, or Asplanat, by Steinheil.....	30.00
2976. Set of 3 Hollow Prisms, mounted on Stand.....	30.00
3640. Ditto, Acromatic ditto, ditto, ditto.....	30.00
3641. Single Rectangular, ditto, ditto.....	16.00
2973. Bottle Prisms.....	\$6.00 to 12.00
2988. Equilateral ditto, 35x33 N. Y. in., each.....	5.00
2983. Acromatic ditto, 30x27 N. Y. in., per pair.....	5.00
2984. Ditto, ditto, 35x32 N. Y. in., per pair.....	6.00
2985. Ditto, ditto, 40x36 N. Y. in.....	7.25
2986. Ditto, ditto, 45x45 N. Y. in.....	9.00
2981. Prisms, for Dark Chambers, 15 Lines, each.....	2.00
2982. Ditto, ditto, ditto, ditto, 21 Lines, each.....	2.50
2974. Elegant Hollow Prism, Bisulphide of Carbon Prism, all the Joints fitted exactly, without flaw, blister or striated lines; a valuable gem for a Cabinet, and made by the celebrated Dr. Steinheil, of Munich.....	\$50.00
2959. Polarization Apparatus, Mitscherlich's, with Extra Tube.....	.60 00
3642. Model of the Human Eye, showing the Motion.....	2.50
2234. Eye Model, showing the Reflection on the Eye Lens, with the use of Spectacles.....	\$15.00
2621. Magnifying Lenses, for Assayers.....	2.50
2631. Set of Glass Lenses, 6, for Demonstrations.....	2.50
3643. Mirrors, Convex and Concave.....	2.75
2632. Apparatus, for Defraction of Light.....	7.50
2810. Ditto, for showing Monochromatic Light, 5 Burners.....	12.00
3109. Ditto, Hoffman's, for Inverting the Soda Flame.....	\$3.00 to 3.50
3644. Ditto, for showing the Oxidation of the Soda Flame.....	2.00
3645. Ditto, Hoffman's Flame Apparatus, with Argand Burner.....	5.00
2622. Lenses, Coddington.....	2 25 to 2.50
2623, '24, '25. Ditto, Stanhope, German Silver.....	2.00 to 3.50

OPTICAL APPARATUS.—Continued.

2526. Loups, single, 9 lines, .75; 11 lines, \$1.00.	
2627. Ditto, double.....	\$1.25 to 1.50
2628. Ditto, triple.....	1.50 to 1.75
2633. Apparatus, for the Recomposition of Light.....	2.50
2676. Microscopes, No. 1, Universal Joint.....	7.50
2677. Ditto, No. 3.....	10.00
2678. Ditto, No. 4.....	15.00
2679. Ditto, No. 1, in two columns, etc.....	25.00
3144, '45. Lantern, Browning's, for projecting Spectra on the Screen.	\$50.00 to 150.00

APPARATUS FOR ORGANIC ANALYSIS.

2948. Air Pump Plate, 7 $\frac{1}{4}$ in.....	\$25.00
1362. Aspirator, the same as used in Apparatus 1352, on p. 15.....	1.50 to 2.50
1360 to 1362. Aspirator, glass.....	2.00 to 3.00
1365. Aspirator Tubes.....	.50
3646. Complete set of Apparatus for Organic Analysis, according to Liebig.....	\$45.00
1714 to 1720. Chloride of Calcium Tubes.....	.15 to .60
1776. Combustion Boats, porcelain.....	.20 to .50
2926. Ditto, ditto, Platinum, per grain.....	.03
2375. Ditto, Furnaces, Bunsen's gas.....	60.00
1780. Ditto, ditto, American gas.....	50.00
1781. Ditto, ditto, French gas.....	30.00
1782 to 1785. Ditto, ditto, to be used with Kerosene.....	12.00 to 40.00
1777. Ditto, ditto, Storer's.....	1.50
1778. Ditto, ditto, Liebig's Charcoal.....	2.50 to 3.00
1789. Ditto, ditto, Foil, of Copper, per ounce.....	.05
1791. Combustion Tubing.....	.40 to .50
1792. Ditto, ditto, for Nitrogen determination.....	.35 to .45
— Copper Turnings (see Chemicals), per lb.....	1.00
2423. Ditto, Gauze, per sq. ft.....	.85
2050. Drying Baths.....	2.50
2061, '62. Drying Tubes, Liebig's.....	.50 to .60
2343. Filling Tubes.....	.50
2417, '18. Graduated Tubes for Nitrogen determination.....	1.25 to 2.50
2416. Glass Tubes, for weighing substances to be analyzed, per doz.....	2.00
3387. India Rubber Tubing, $\frac{1}{4}$ in. bore, per ft.....	.10
2664. Mercury Jar, of glass.....	1.00 to 2.00
2670. Ditto, Trough, Porcelain, to hold 5 lbs. of Mercury.....	1.00
2671. Ditto, ditto, ditto, 16 lbs. ditto.....	2.00
2853. Nitrogen Bulbs, Horsford's.....	.75
3647. Ditto, ditto, Simpson's.....	1.00
2968. Potash Bulbs, Geisler's or Mohr's.....	1.00
2966. Ditto, ditto, Liebig's.....	.75
2969. Ditto, Pipettes.....	.50
2343. Suction Tubes.....	.50
3239. Wood Supports.....	1.50

CHEMICALS.

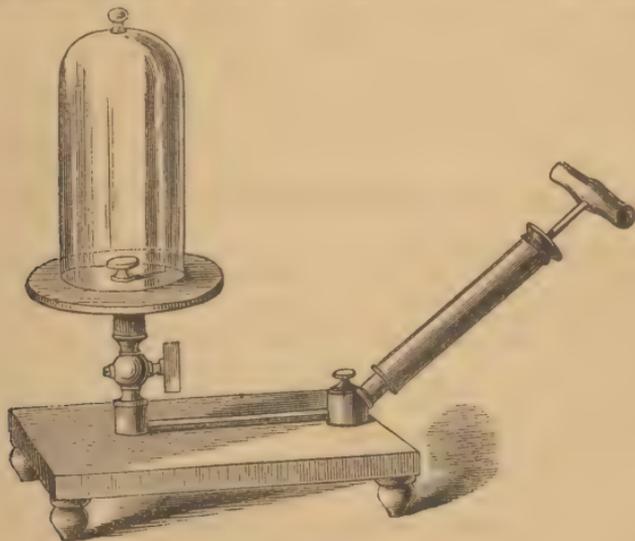

Black Oxide of Copper.	Chloride of Calcium, fused.
Chromate of Lead, pure fused	Chlorate of Potash, cryst.
Soda Lime.	Copper, in fine strips.
Bichromate of Potash, cryst.	Ditto, Turnings.
Caustic Potash.	Asbestos, long fibre.
Chloride of Calcium, crude, dry.	

APPARATUS FOR PNEUMATICS.

2946. Air Pumps, large and powerful.....	\$100.00
2951. Ditto, ditto, Mischterlich's.....	10.00
2950. Ditto, ditto, ditto, mounted.....	15.00

APPARATUS FOR PNEUMATICS.—Continued.

2952. Air Pumps, Liebig's, Brass Cock\$15.00
 2948. Ditto, ditto, with Plate and strong Clamp to attach to a Table in
 place of Mahogany base.....\$20.00

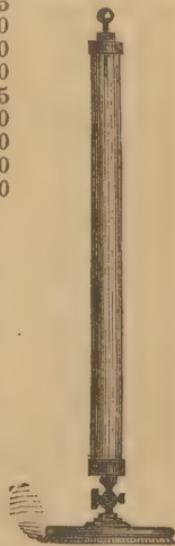

2948

2948. Air Pumps, mounted on a fine polished Mahogany base, with heavy
 ground glass Plate.....\$25.00
 The more costly grades of Air Pumps can be furnished, when desired, of
 first-class workmanship.

1443. Swelled Glass Receivers, with knob, $\frac{1}{2}$ gal. \$1.50, 1 gal. 2.00, 2 gal. 3.00
 1444. Ditto, ditto, ditto, open tops, $\frac{1}{2}$ " 1.75, 1 " 2.50, 2 " 3.50
 1449. Plain ditto, ditto,.....quarts, 75 cts., $\frac{1}{2}$ " 1.00, 1 " 1.50
 1446. Ditto, ditto, ditto, tall, with knobs, " 75 " $\frac{1}{2}$ " 1.00, 1 " 1.50
 1442. Ditto, ditto, ditto, flat, ditto,.....6 in. \$1.25, 8 in. 1.75
3648. Receiver, with sliding Rod, Hook and Ball.... 5.00
 Ditto, the Cap and Stop-cock fitted, extra..... 2.00
 3416. Water Hammer..... 1.00
 2555. Bladder and Hand Glass..... .75 to 1.25
3649. Magdeburg Hemispheres\$7.00 to 10.00
3650. Bolt Head Experiments..... 4.00
3651. Mercury Shower..... 3.00
 1289. Air Balloons, glass, for weighing Air, 1 gal..... 1.00
 1405. Ditto, ditto, rubber and Gold-
 beater's, 2 gal.....\$1.50 to 5.00
 Ditto, ditto. See Balloons.
 3338. Torricellian Experiments.\$4.50
3652. Guinea and Feather Tube,
 \$8.00 to 10.00
3653. Bell, in Vacuo 4.00
 1684. Cartesian Imps, singly, from
 .25 to 1.00
 1686. Ditto, ditto, in Bottles, from
 \$1.50 to 1.75
3654. Model, Hydrostatic Press,
 \$20.00
 2459. Hydrolyse, or Forcing Pu p,
 producing a constant stream of water,
 enclosed in a fine polished Velvet-lined
 Case.....\$4.00

3649

3652

APPARATUS FOR PNEUMATICS.—*Continued.*

2460. The foregoing can also be used as a Syringe, supplied with Male and Female Joints, in fine polished Velvet-lined Cases.....	\$5.00
The above is the best form of Injecting Syringe known, as its Valves and all its appurtenances are all Metallic.	
3655. Hydrostatic Balance.....	\$10.00
3656. Apparatus, for upward and downward Pressure.....	14.00
3657. Barometer Apparatus.....	6.00
1822. Apparatus for Air Cylinder.....	12.00

“ Mould and Holder for preparing the Cone50
1830. Platinum Cone, for Supporting the Filter, price according to weight, per grain, about75

 VARIOUS FORMS OF APPARATUS,

ACCOMPANIED WITH

ACCURATE DRAWINGS AND SPECIFICATIONS,

MAY BE MADE

SPECIALLY TO ORDER,

EITHER IN

GLASS, BRASS, OR WOOD.

ORDERS ALSO FOR

TECHNICAL AND TEXT BOOKS,

WILL BE

EXECUTED PROMPTLY,

AND

PACKED WITH GOODS IN MY LINE, WITHOUT EXTRA CHARGE.

3667. Dr. SQUIBBS'

NEWLY INVENTED

UNIVERSAL LABORATORY SUPPORT,

Adapted to sustain Tubes of any size, up to 3 inches. Price, \$2.50

This SUPPORT supplies a want long experienced in the Laboratory, in substituting a single Apparatus for several varieties.

International Exhibition,

PHILADELPHIA, 1876

FIRST PREMIUM

E. B. BENJAMIN,

10 BARCLAY STREET, NEW YORK.

AWARDED FOR

EXCELLENCE OF DESIGN AND FINISH

CHEMICAL APPARATUS

AND

PURITY AND RARITY

OF

CHEMICALS.

I have lately discovered an improvement to the

Bunsen Burners,

which constitutes them non-retreating, and for which I have applied for a Patent.

It is expected that they will be ready to put on the market within the next six weeks.

For low evaporations, this new Burner is unequalled, besides being inexpensive.

E. B. BENJAMIN.

ERRATA.

Price of Potassa Cyanide, C. P. T., should be 25 cents per oz.

“ Tin Bisulphide, should be 65 cents per oz.

No. 10 BARCLAY STREET,

NEW YORK, *November 1, 1876.*

Thanking my many kind patrons for their generous support the past years, I beg respectfully to present this list to their careful perusal and attention.

The long established and celebrated house of Dr. Trommsdorff having granted me extra facilities on their pure chemical products, I beg permission to present to my kind patrons the following low prices for rare and pure chemicals, prefacing the same with the observation, that as I have no trade for drugs, buyers will perceive that I have no temptations to substitute ordinary chemicals for *pure*; therefore, the following list is intended for only the best article of its kind of the sort named.

There is also added to the List of Chemicals, some few new styles of Apparatus which are not in my catalogue, and I beg to add that I am also making material reductions in such American-made articles as the lower prices of labor at this time warrant. For example: Combustion Furnaces, 25 Burners, quoted formerly at \$50.00 I now sell at \$40.00; ordinary Bunsen Burners, at \$7.00, net, the dozen, &c., &c.

PRICES OF GOODS.

Some of my old patrons have asked if there is a reduction in the best foreign goods. In reply, I beg to say that there is rather an advance abroad. The R. Berlin Factory have advanced prices from 30 to 50 per cent., and the best Bohemian Glass is advanced 10 to 15 per cent., while the duty within the past three years is about 10 per cent. more on tariff before that time. Hence, *reduction in prices would likely mean poorer goods.*

Buyers will kindly compare the German and Bohemian glassware as to quality, and as there is about 50 per cent. difference in cost abroad, any ordinary offer of discount is not likely to cover the difference in quality, any more than such discount will cover the difference between Semi and Royal Porcelain. By comparing, for example, the Bohemian Funnels No. 2318 with the German Funnels No. 2322. an approximation of the difference may be arrived at.

The genuine Bohemian *Flasks* and other glassware, may be distinguished from the German, French, and American by a delicate greenish tint across the tops of the vessels; other glass, French especially, being nearly white, or straw-color tint.

Again, the Beakers ordinarily quoted as 1/3 are identical in size with my 0/2, and those called 1/5 are identical with my 0/4, &c. —my estimate of capacities allowing for boiling. *The sizes named by me are the same as filled in Europe, and I am not responsible for sizes made up here by any other dealer.* A comparison will show that my prices are, and have been very low, and so of other goods

RECOMMENDATIONS,

Those of my patrons who have always taken an active interest in my success, will be pleased to learn that the Prize Medal has been awarded to me, alone, at the International Exhibition at Philadelphia, *over all competitors in the United States*, "for Pure and Rare Chemicals and Chemical Apparatus of excellent design and finish," by the Judges in the group comprising this class of goods. The Judges are: Charles A. Joy, Ph. D., Professor of General Chemistry, Columbia College, N. Y.; F. A. Genth, A. M. M. D., Professor of Analytical Chemistry, University of Pennsylvania, Philadelphia; Dr. J. Lawrence Smith, the celebrated Chemist of Louisville, Ky.; Prof. C. F. Chandler, Ph. D., M. D., LL.D., Professor of Analytical and Applied Chemistry, School of Mines, Pharmacy, &c.; Prof. J. W. Mallett, Ph. D., University of Virginia, and the following eminent gentlemen from Europe, viz.: Dr. William Odling, F. R. S., of Great Britain, chief among English chemists; R. Van Wagner, of Germany, Editor of the *Jahresbericht der Technologisches Chemie*; J. F. Kuhlman fils, of Lisle, France, probably the largest manufacturer of chemicals in the world; Prosper de Wilde, Belgium, and Emanuel Paterno, Italy, all of whom are justly celebrated in the scientific world. The award of which these renowned gentlemen have deemed my goods worthy, will, I trust, stimulate my countrymen to encourage all efforts to place this establishment on a par with any other abroad.

I have lately secured the assistance of Mr. R. T. Deakin, of Philadelphia (senior partner of the firm of R. T. Deakin & Co., Brass, Syringe, and Pump Makers,) who thoroughly learned his trade of working in brass apparatus of every kind in England, and whose work is well known to those who have used it to be of the very best character. He will take entire charge of all manufacture and repairing of brass apparatus, which will be guaranteed to be of the very best quality and workmanship.

Price, \$105.00

No. 2. Analytical Balance, in fine polished glass case, capacity 100 grammes in each pan. Beam divided in half parts of milligrammes. Sensible to 1-10 milligrammes, with apparatus for specific gravity. All bearings agate.
3/4 in. pans. 12 in. Beam.
Price, \$86.00

No. 3. Analytical Balance, in French polished mahogany case, with counterpoised sliding door. Capacity 2000 grains, sensible to 1-100 grain. Steel bearings, movable.
3 1/2 in. pans, 10 in. beam.
Price, \$40.00

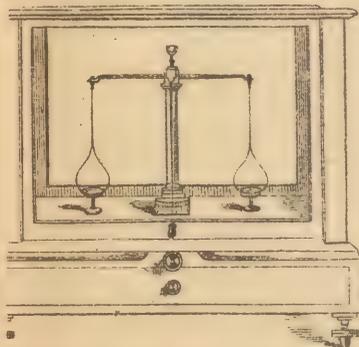

No. 4. Same Balance as No. 3, has attachment for rider and pan arrests. Beam graduated to one milligramme.
Price, \$50.00

Troemner Specific Gravity Scale.

Constructed after the plan of Dr. Mohr.
Price complete, \$20.00

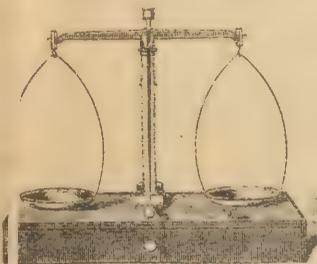

Assay Balances.

No. 1. French polished glass case, beam resting on agate bearings. Sensible to 1-20 milligrammes.
Price, \$55.00

No. 2. French polished glass case. Is arranged with rider apparatus and pan arrests. Open beam, divided in 10 milligrammes; beam resting on agate planes. Needle shows ten divisions for one milligramme.
Price, \$80.00

Analytical Scales. Fig. 22.

For weighing Ores, Minerals, Gold and Silver Coin, Jewelry, Chemicals, &c., &c.

PLATINUM.

The increasing demand for the "non-blistering" Platinum, of which my establishment is the depot, has enabled the company which I represent to grant me extra facilities in this line of goods, and I would respectfully request a comparison of the quality of these goods with those sold elsewhere.

FRACTIONAL ELECTRICAL MACHINES.

I have nearly perfected arrangements for bringing forward a new Patent Electric Machine, yielding long sparks and adapted to the means of our academies and schools. The price will be about twenty-five dollars each. The larger electric machines *now made here* are materially reduced in price, in consequence of decline in cost of making.

BALANCES AND WEIGHTS

My patrons will receive herewith a list of Balances and Weights published by Henry Trøemner, which they will please substitute for those of Becker & Sons, published in my Catalogue of '72. Mr. H. Trøemner having appointed me a special agent here for his Analytical Balances and Weights, all sold by me are guaranteed fully equal to any sold in this country.

CHLORIDE OF CALCIUM TUBES.

Two Bulb with Interior Tube.....each, \$0.50

This is a new form of Chloride of Calcium Tube devised by Prof. Mixer, of Sheffield Scientific School, New Haven, and in use at that Institution. It is an improvement upon the old form of drying tube, the difference consisting in the addition of a small interior tube, reaching nearly across the smaller of the two bulbs. The advantage which it has over the old form can be seen at a glance, although no one can fully appreciate its usefulness without having used both styles. When in use, the gas is caused to flow from the smaller end to the larger one, the large bulb and tube being filled with the drying material, chloride of calcium.

During the passage of the hygrometric gas, the aqueous vapors condense for the most part, in the smaller bulb, only a comparatively small amount being carried over into the chloride of calcium. For this reason the latter may be used over again, and the operation repeated several times without refilling the tube.

No. 3678.

The part which the small interior tube plays is, to keep the water which collects in the small bulb from running into the large one, a disadvantage to which the old form is subject. Furthermore, the tube may be used in an inclined or even vertical position without inconvenience, and still do excellent service.

The use of cotton may be dispensed with in this form of apparatus, as the very small bore of the interior tube will, if care be taken to select *lumps* of chloride of calcium (instead of the same *powdered*), prevent them from falling through into the small bulb.

RADIOMETERS.

Crookes'.....e.ach, \$7.50 to \$9

No. 3672.

The Radiometer, invented by Wm. Crookes, Esq., F. R. S., of England, and manufactured in its most elegant form by Dr. Geissler, of Germany, the manufacturer of the world-renowned "Geissler Tubes," (who has appointed me his agent for their sale), is shown in the accompanying figure *B*. It consists in the main of four radial arms of very thin metal, carrying at their extremities diamond-shaped pieces of a peculiarly light substance, the character of which varies somewhat in each manufactory. The system is delicately poised at its centre upon a needle fastened into the extremity of an upright rod of

glass, and kept from falling from the same by a vertical glass tube whose lower extremity projects over the cap of glass which rests upon the needle and upon which the arms are fastened. The whole is enclosed in a shell of glass, pleasing in design and strong enough to resist the pressure of the external atmosphere (for the apparatus is exhausted as perfectly as can be done by a sprengel pump, to obviate as much as possible the resistance which would be caused by the air).

Upon placing the apparatus in the sunlight, or allowing the light from a magnesium or electric light to fall upon it, the radial arms begin to revolve and continue to move as long as the light rays last, the velocity of the revolution increasing or decreasing in proportion to the intensity of the light.

PROF. RICHARDS' ASPIRATOR.

A substitute for the Bunsen Pump each, \$1 50

C represents the Aspirator invented by Prof. Robert H. Richards, of the Mass. Institute of Technology, Boston, and used for the purpose of quick filtration. It is the result of a number of careful experiments made by the above gentleman, and for simplicity of design and the ease with which it can be manipulated, together with its efficacy, it recommends itself to all who wish a good effective filter-pump, without being compelled to pay the high price which a more elaborate piece of apparatus would obviously command. In order to use this pump, all that is necessary to do is to connect the tube at the top with the faucet of an ordinary hydrant by means of a length of rubber tubing, whilst the filtering flask carrying the funnel is attached to the tube at the left of the pump. Upon allowing the water to flow through the latter, the air in the cylindrical

No. 3673. part surrounding the small interior tube is caught, as it were, by the water and drawn into the lower tube, thus producing a rarefaction of the air in the tube at the left and in the filtering flask. The result is a flow of water through the funnel and its contained precipitate, and a thorough washing of the latter. By continuing the working of the pump after washing the precipitate, the latter may be so completely dried as to be ready for ignition in a crucible, and the pump is also cleared well at the same time. As a certain ratio exists between the size of the orifice of the interior tube, the diameter of the exterior tube, and the force of water issuing from the hydrant, it will be necessary for parties ordering the apparatus of me to state the approximate fall and force of water at their command, that the pump may be made to correspond.

FUNNEL FOR RAPID FILTRATION.

Casamajor's modification of Carmichael's process. each, \$0 50 cents.

No. 3674.

This is represented at *D* as a small inverted funnel. The original funnel, as conceived by Carmichael, was made entirely of glass, with a bottom perforated with fine holes, these holes being produced, whilst the glass was in a state of semi-fluidity, by means of a red-hot needle. This being a very uncertain, if not an impossible undertaking, the idea occurred to Mr. P. Casamajor, of Williamsburgh, that by making use of a funnel provided with a movable bottom or diaphragm of platinum, the end might be attained. This funnel was tried and found to answer all that was required of it, and it is now offered to the chemist as a cheap,

efficient and very convenient apparatus for rapid filtration. It is made, as shown in the cut, of glass, with its stem bent at a right angle, the part shaped like a bell being provided with a circular disc of platinum perforated with fine holes. (The disc is not shown in the diagram.)

The *modus operandi* is as follows: The disc, whose diameter is about 20mm., is laid upon a piece of filter-paper (Swedish being generally preferred), and a circle of 25mm. is cut out of the latter, thus leaving a small margin all around the edge of the platinum. The latter is then separated from the paper and laid upon the funnel, completely covering the large opening. The paper is then moistened and laid over the platinum, covering it and extending over the edge all around, where it is brought in contact with the glass.

The Funnel is then connected by means of a rubber tube attached to its stem with the flask which is in turn put in communication with the filter pump. The mouth of the Funnel, which is quite small, is then placed in the platinum or porcelain vessel in which the precipitate is to be ignited, and the liquid containing the latter is poured into the vessel. Upon starting the pump, the filtration begins and is continued as long as necessary, the final result, after washing, &c., being a precipitate in the dish with a small disc of paper upon it, the ash of which, after ignition, may be disregarded. The upper edge of the Funnel holds a little of the precipitate which may be weighed with the Funnel itself.

IMPROVED FORM OF LIEBIG'S POTASH BULB.

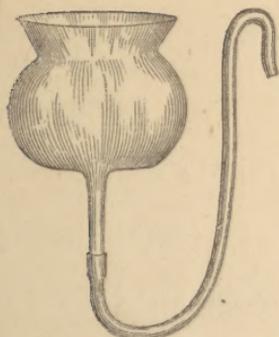

By Alvergniat Freres, Paris.....each, \$1.00

No. 3675.

This piece of apparatus is shown at *E*, and differs from what has always been known as Liebig's Potash Bulb in having the lower bulbs connected by curved instead of straight tubes: at the same time the circular bulbs at the side are replaced by pear-shaped ones, the latter as well as the extra length of tubing giving increased contact of gas and liquid and thereby increased absorption. Again, the extension of the tubes (at the lower part) to one side, forms a base of support so that the apparatus may be placed upon the pan of the balance and readily weighed without the trouble of attaching wires to the upper part, and *hanging* it to the beam.

These bulbs are used by many at present in preference to the older form, and bid fair, in time, to supersede them, for this is an age of progress as well in the chemical laboratory as anywhere else, and it is but natural for the analyst to select for his work those pieces of apparatus which can be most conveniently used while at the same time performing their work satisfactorily.

FILTER QUICK, CASAMAJOR'S

Each, \$0.75.

This Filter has been fully described in the August, 1875, number of the American Chemist, and is found to be very useful not only in Filtration, but also in thoroughly drying the precipitates afterwards.

CONSTANT WATER BATH LEVEL.

Each \$7.50

No. 3677.

The cut annexed represents a very useful copper apparatus, contrived by Dr. J. Lawrence Smith, of Louisville, to maintain a continued level of water in a series of water baths.

The outer vessel has an arm which sustains a glass pipette drawn at the lower end (C) and held in position by small pieces of caoutchouc tubing (A & B). This pipette passes through the metallic swimmer (E) placed within the above named vessel. Under the bottom of the swimmer is an elbow supporting a rubber cushion (F), which—when the swimmer is buoyed above the desired level—presses against the drawn point of the pipette and stops the flow of water. The top of the glass pipette (B) is united to the water supply, and the discharge tube (D)

projecting from the foot of the outer vessel, is connected with the water baths.

No. 3678.

IRON OXYGEN RETORT.

Price, \$4.00

Dr. Smith has also designed a very available iron retort for oxygen, consisting of a cap, five inches in diameter, fitting, by a water-groove into a base of same width. From the top of this cap a piece of ordinary iron gas pipe runs up eighteen inches ending in a gallows screw connection to attach to the receiver.

PORCELAIN CONCENTRIC RINGS.

for use on small Evaporating Dishes ; as water Baths. Per set, \$1.25.

These rings are now very much used by the European Chemists, as they can be applied to any small vessel. Suitable for water Bath and also be used as supports over crystallizing Dishes and Jars.

Buyers cannot be too much impressed with the absolute advantage of purchasing direct from a responsible dealer in chemical apparatus, who understands the uses of such goods, and has a reputation at stake in his *special* line ; who has the *goods in stock* adapted to the purposes advertised, and has no occasion to provide any makeshift of supposed resemblances to catalogue illustrations. Very frequently I receive advices from chemists, stating that they have handed orders for apparatus, chemicals &c., selected from my Catalogue, to dealers near them, which goods were never bought from me by their agents, resulting in furnishing the chemist with poor apparatus, and reflecting unjustly on the character of my stock. Only by buying *direct* can the chemist be sure that his entire order comes from a dealer in chemical apparatus

Every intelligent chemist knows that the labor of preparing an analysis, is liable to be lost from the use of imperfect or badly annealed vessels, and will therefore avoid investing in poor articles because they may happen to be cheap.
